

Maths

At Kettering Park Infant Academy, we are committed to developing confident, curious, and creative mathematicians who enjoy exploring mathematical concepts and making meaningful connections in their learning. Our aim is to foster a positive attitude towards mathematics, enabling all children to develop a deep understanding of the subject and the confidence to apply their knowledge in a range of contexts.

We believe that high-quality mathematics teaching should provide children with opportunities to investigate, reason, problem-solve, and communicate their mathematical thinking. Through carefully planned learning experiences, children are encouraged to ask questions, explore different strategies, and develop resilience when faced with challenges.

To support the delivery of our curriculum, we use Power Maths throughout Key Stage 1 and White Rose Maths in the Early Years Foundation Stage. These schemes provide a coherent, mastery-based approach to mathematics, allowing children to build knowledge progressively and securely. Lessons are carefully sequenced to ensure that learning is embedded and that children have the opportunity to revisit and consolidate key concepts over time.

Through our engaging and inclusive mathematics curriculum, we strive to equip every child with the skills, confidence, and enthusiasm needed to become successful lifelong learners and mathematicians.
